

3MSM Health Care Academy

Advanced Monitoring Practices in Today's Sterilisation Technology

3M Breakfast Symposium at FSRACA 2023

Join the 3M symposium on "Advanced Monitoring in Today's Sterilisation World," where professionals in sterilisation will explore international ISO standards, key evidence, and case studies. The symposium will also delve into the significant impact of quality assurance monitoring on sterilisation failures and load recalls through the presentation of current case studies and key evidence. Participants will have the opportunity to explore real-life examples where inadequate monitoring and ineffective surveillance measures can lead to compromised sterilisation processes and subsequent recalls. This will underscore the need for robust quality assurance protocols and highlight the crucial role of chemical indicators in preventing such incidents. Together, we'll foster knowledge exchange, promote best practices, and advance monitoring technology for steam and VH202 sterilisation, improving patient safety globally.

*Breakfast will be provided to registered attendees.

Speaker:

Craig Wallace, International Sterilisation Consultant, USA
Bachelor of Science in Biochemistry & Microbiology, University of Minnesota, USA.

Date	Time
Friday 11 August 2023	7.45 – 8.30 AM

Venue
CENTREPIECE at Melbourne Park
